I need to fi nd the 1000th-ranked video in a dataset ordered by comment count. How do I determine what values to use for OFFSET and LIMIT to retrieve only the 1000th row?

To retrieve only the **1000th-ranked row**, use:

sql CollapseCopy

```sql
LIMIT 1 OFFSET 999
```

`OFFSET` is zero-based, so the first 999 rows are skipped, and `LIMIT 1` returns the next row.

Example:

sql CollapseCopy

```sql
SELECT *
FROM videos
ORDER BY comment_count DESC
LIMIT 1 OFFSET 999;
```

For consistent results when videos have the same comment count, add a tie-breaker:

sql CollapseCopy

```sql
SELECT *
FROM videos
ORDER BY comment_count DESC, video_id ASC
LIMIT 1 OFFSET 999;
```
